Empathy Map

Create an empathy map to understand your customer/user from four perspectives — what they Say, Think, Do, and Feel — in relation to the problem your project addresses. This helps build a customer-centric solution.

SAYS ● “I dont understand this at all, can you explain it again?” ● “Ive been stuck on this for hours.” ● “I dont want to ask a dumb question in front of everyone.”				THINKS ● “Am I falling behind everyone else in class?” ● “Maybe Im just not cut out for this subject.” ● “I wish someone could explain this patiently, without judging me.”	
				PERSONA Riya Sharma <i>Year CS Undergraduate)</i>	
DOES ● Searches forums and YouTube late at night for explanations ● Re-reads the same paragraph or slide multiple times ● Avoids office hours out of embarrassment about “not getting it”				FEELS ● Anxious about falling behind on deadlines and grades ● Frustrated when the same mistake keeps repeating ● Relieved and motivated the moment a concept finally clicks
