Empathy Map

Create an empathy map to understand your customer/user from four perspectives — what they Say, Think, Do, and Feel — in relation to the problem your project addresses. This helps build a customer-centric solution.

Persona: Riya Sharma (2nd Year CS Undergraduate)

SAYS	THINKS
• “I dont understand this at all, can you explain it again?” • “Ive been stuck on this for hours.” • “I dont want to ask a dumb question in front of everyone.”	• “Am I falling behind everyone else in class?” • “Maybe Im just not cut out for this subject.” • “I wish someone could explain this patiently, without judging me.”
DOES	FEELS
• Searches forums and YouTube late at night for explanations • Re-reads the same paragraph or slide multiple times • Avoids office hours out of embarrassment about “not getting it”	• Anxious about falling behind on deadlines and grades • Frustrated when the same mistake keeps repeating • Relieved and motivated the moment a concept finally clicks
